VPN Troubleshooting – Initial Assessment

```
"vpn_initial_check": {  
  "topic": "VPN Connection Initial Assessment Steps",  
  "content": ""VPN Connection Initial Assessment Process:
```

Step 1 – Error Message Check:

- Check if you're seeing an error message when trying to connect
- Note the specific error message for Cisco AnyConnect VPN
- Document exact error text for troubleshooting

Step 2 – Device Type Verification:

- IBM-issued devices: Continue with troubleshooting steps
- Personal devices: Not compliant, cannot connect to IBM intranet. Navigate to Devices Portal at <https://ibm.biz/devices> to view compliance or request new device

Step 3 – Internet Connectivity Check:

- Verify device is connected to internet by opening a website
- Test with multiple websites to confirm connectivity
- If no internet connection, resolve connectivity first before VPN troubleshooting""

  "topic": "Restore Internet Connection for VPN",  
  "content": ""Steps to Restore Internet Connection for
```

VPN:

When device has no internet connection, VPN troubleshooting cannot

proceed.

Restoration Steps:

1. Turn on your router/modem
 - Check power cables and connections
 - Wait 2-3 minutes for full startup
2. Enable Wi-Fi if using wireless
 - Check Wi-Fi is turned on in device settings
 - Verify correct network selection
3. Plug in Ethernet cable if available
 - Try wired connection for more stable connectivity
 - Test different ethernet ports if available
4. Check router/modem status
 - Look for error messages on device display
 - Check status lights (should be solid, not blinking)
 - Contact ISP if hardware appears faulty

Verification: Test internet by visiting multiple websites. Confirm stable connection before proceeding with VPN setup."""

# Mac Device Setup DEP
```

```
"mac_device_setup_dep": {
  "topic": "Mac Device Setup DEP Enrollment Process",
  "content": """"Mac Device Setup with DEP Enrollment:
```

Overview: All IBM Macs are enrolled in Apple's Device Enrollment Program for automated setup

Setup Process Dependencies:

- Remote Management screen appears: Device is DEP-enabled (automated)
- Migration Assistant appears: Manual setup required

Initial Setup Steps:

1. Power on new Mac
2. Connect to network (use IBMInternet for initial setup)
3. Complete initial setup wizard
4. Watch for DEP enrollment - DO NOT skip, required for IBM devices

DEP Enrollment Process:

1. IBM Authentication:

- Enter IBM w3id and password
- Complete two-factor authentication if prompted
- Wait for authentication completion

2. Create Local User Account:

- Use IBM employee name for consistency
- Create secure password (different from w3id)
- Configure user preferences

3. Accept Terms and Conditions:

- Review and accept Apple's terms
- Accept IBM device usage policies
- Complete privacy settings

Post-Setup Configuration:

- Mac@IBM App Store deployed automatically
- Essential security software installed
- IBM management profiles applied

Next Steps: Set Up at IBM (essential apps), Set Up Outlook, Connect to IBM Wi-Fi, Transfer Data to New Computer

Time Requirements: Allow at least 45-60 minutes for complete setup

"content": ""Windows 11 Device Setup Process:

Prerequisites:

- High-speed internet connection access
- IBM w3id and password ready
- Allow at least 45 minutes for complete setup
- Ensure device is connected to power

Initial Setup Process:

1. Power on new Windows 11 PC
2. Follow initial Windows 11 setup wizard
3. Connect to corporate network (use ethernet cable for most reliable connection)
4. Domain join process - device should automatically attempt domain join
5. Enter IBM credentials when prompted
6. Wait for domain join completion

Post-Setup Configuration:

1. Windows Updates - allow Windows to download and install updates (may take 30-60 minutes)

2. Corporate Software Deployment – PC@IBM App Store automatically installed
3. User Profile Setup – log in with IBM credentials

Verification Steps:

- Computer Properties should show IBM domain
- Run gpresult /r to verify policies applied
- Software Center should be available with IBM software
- PC@IBM App Store should be installed and accessible

Troubleshooting:

- Domain Join Issues: Verify network connectivity, check with IT for domain configuration
- Software Installation Problems: Check Windows Update status, restart computer, contact IT if software missing after 24 hours

# Notes Install and Setup
```

```
"notes_install_setup": {  
  "topic": "Notes Install and Setup Process",  
  "content": ""Notes Install and Setup Process:
```

Important Notice: The majority of IBM employees have moved to Outlook (Microsoft Exchange) for Mail and Calendar. Notes content is only relevant for a small number of users with specific use cases.

Installation Process:

1. Download Notes from PC@IBM App Store
2. Run installer with administrator privileges
3. Follow installation wizard prompts
4. Complete initial configuration

Special Instructions:

- Outlook Users: Special instructions included for users transitioning from Outlook
- Apple Mail Users: Specific guidance for Mac users with Apple Mail

Post-Installation Tasks:

1. Configure Notes client settings
2. Set up database replicas
3. Configure security settings
4. Test mail routing and delivery

Database Setup:

- Create local mail database replica
- Configure server connections
- Set up offline synchronization
- Test database access and replication

Security Configuration:

- ID File Management: Secure Notes ID file storage, configure password policies
- Certificate Management: Install necessary certificates, configure encryption settings

Troubleshooting Installation Issues:

- If installation fails from PC@IBM App Store: Follow specific troubleshooting steps, clear app store cache, run as administrator
- System Compatibility: Verify Windows version compatibility, check available disk space

Configuration:

- Mail Configuration: Configure mail server connections, set up mail routing
- Database Management: Create necessary local replicas, configure database encryption

Migration Considerations:

- Assess migration feasibility to Outlook
- Plan transition timeline
- Export important data
- Maintain access to historical data

Support: Comprehensive Notes administration guides, specialized
Notes support team""
